

FortiSASE

Extend the corporate perimeter to secure data to/from all endpoints, and enable secure access to the Internet, private applications, and SaaS applications.

With the rise of hybrid work, combined with application migration to cloud and SaaS, organizations must now secure employees who access the network and applications from anywhere. This shift has significantly expanded the attack surface, thereby increasing the complexity of network, application, and data security.

Companies with existing Fortinet deployments can seamlessly expand their network to include SASE locations that join natively with their SD-WAN, NGFW or DCFW segments. This enables SASE adoption without impact to NOC/SOC teams, plus eliminates the need to architect & maintain complex routing configurations. Zero Trust is included with all FortiSASE deployments.

New customers can seamlessly migrate to FortiSASE by leveraging Fortinet ADS (Advanced Deployment Services), which simplifies onboarding through guided planning, automated configuration, and rapid policy migration with minimal disruption to users and operations.

How It Works

Once deployed, all users and device traffic is automatically inspected by FortiSASE (with optional zero trust enforcement) before allowing access to the Internet, private networks or corporate SaaS applications.

Deployed SASE points of presence (POPs) seamlessly connect to existing FortiGate NGFW, SD-WAN or DCFW deployments. And, with FortiOS everywhere, existing NOC/SOC processes can easily manage FortiSASE locations.

Remote User Subscriptions

Cloud-based firewall and secure web proxy that provides security (FortiGuard Labs) for remote users regardless of location when accessing the Internet.

① FortiGate Secure Private Access requires SD-WAN Service Bundle

② Each user can use up to three devices and can be a combination of agent-based and/or proxy-based.

③ Applicable to agent-based only

SD-WAN Service Bundle – SASE Starter Kit

To simplify the journey from SD-WAN to SASE, customers can use the FortiGate SD-WAN service bundle. This bundle includes a starter kit of FortiSASE Standard users plus Secure Private Access (SPA) connectivity. It is supported on F-series and G-series FortiGate models starting with the 60G. Start your SASE adoption with as little as 5 users!

For FortiGate models below the 60G the SD-WAN service bundle includes Secure Private Access (SPA) connectivity only.

^② Requires a subscription with a minimum of 500 users.

FortiSASE China Offering

FortiSASE is available in China via a dedicated partner, in three data centers located in Beijing, Shanghai, and Guangzhou.

The FortiSASE China license offers the same feature set and functionality as the FortiSASE Standard license, ensuring consistent performance and security capabilities for users connecting within mainland China.

FortiIdentity Cloud

FortiIdentity Cloud is an Identity and Access Management as a Service (IDaaS) cloud service offered by Fortinet.

FortiSASE Support Services

Fortinet offers comprehensive Support options tailored to streamline onboarding and provide technical assistance for your FortiSASE deployment. Our Support services are designed to seamlessly adapt to the evolving needs of your organization's SASE requirements whether you have standard deployments, advanced capabilities, or configurations with increasing complexity and customizations. Rest assured that you can confidently leverage our technical expertise and best practices knowledge throughout your FortiSASE journey.

Features

SUPPORT	SUMMARY	HOW TO ORDER
Self-Service with Technical Support	Self-led learning using straightforward best practices. 24x7x365 Technical assistance with FortiSASE questions and issues.	Publicly available resources. Technical support included with all FortiSASE Subscriptions.
Assisted Onboarding	Dedicated support queue for direct access to specialists who can advise on enterprise integrations	Included with FortiSASE Advanced and Comprehensive Subscriptions
Advanced Deployment Service ^①	Consultant-led Professional Services based on predefined best-practice modules, combined with a Service Delivery Manager. 3 months.	Service Proposal
Custom ^①	Complex enterprise deployments requiring fully customized onboarding and advanced dedicated 24x7x365 technical support.	Custom Scope

^① Please contact Fortinet for details

Frequently Asked Questions

How do I get started with FortiSASE?

All new customers should purchase a User-based license to get started. All other SKUs are registered on top of the initial deployment.

How many locations are included with the User Subscription?

FortiSASE Standard and Advanced user subscriptions include up to 4 locations, selected during activation.

FortiSASE Comprehensive subscriptions of less than 200 users include access to 1-2 locations. Refer to <https://links.fortinet.com/fortisase/dcs-per-license> for details.

How many locations can be supported with the Location Add-on license?

Up to 16 additional locations can be purchased for a maximum of 20 total locations.

What locations are supported in Standard, Advanced and Comprehensive?

Refer to: <https://links.fortinet.com/fortisase/global-data-centers>.

Can I mix Standard, Advanced and Comprehensive together in the same account?

The Region Add-on SKU can be mixed when combined with a FortiSASE Comprehensive subscription. A customer may purchase either the Fortinet Location or Public Cloud location add-on license, depending on individual requirements. All other components in the account must use the same type. Multiple accounts can be used for different types.

What FortiGate platforms does the SPA Service connection support?

All platforms are supported, but for SD-WAN deployments the FortiGate-100F and above is strongly recommended. Desktop platforms may be used for single NGFW connections.

Is the SPA license required for every FortiGate in an SD-WAN deployment?

No, the SPA license is only required for the Hub locations.

If the Hub or single NGFW location is an HA Cluster, is a license needed for each member?

Yes.

I already purchased the FortiClient ZTNA/VPN or EPP/APT options. Can I upgrade them to SASE?

Yes. Refer to the following documentation: <https://links.fortinet.com/fortisase/faqs>.

How is the Data Transfer calculated?

Tenant level Data Transfer is calculated by adding up entitlement for all purchased contracts. For example, a subscription for 100 users would entitle for 25 TB of Data Transfer globally. Refer to the Service Description for more details.

How many dedicated IPs can I add to a single Security PoP?

Each Fortinet or Public Cloud Security PoP can support up to 5 dedicated egress IPs (DEIPs), 4 of these DEIPs can be used for source IP anchoring rules.

How many connections can a Branch On-Ramp Location support?

Each Branch On-Ramp Location includes 1 Gbps of shared bandwidth for up to 2000 supported connections. Each account can have a maximum of 20 Branch On-Ramp locations and a total of 40,000 Branch On-Ramp connections. Bandwidth is dedicated to the Location and not shared with Remote Users or Edge Devices. Multiple On-Ramp Locations can be provisioned in the same FortiSASE Region. Each Location has a standalone bandwidth limit.

What devices can connect to a Branch On-Ramp Location?

For a full list of supported device types, refer to: <https://links.fortinet.com/fortisase/sd-wan-on-ramp>

How many Locations can be supported with the Branch On-Ramp License?

Up to 20 Branch On-Ramp Locations can be purchased for a single account. A minimum of 2 locations is required for redundancy.

Can FortiSASE be managed by FortiManager?

Yes, FortiManager 7.4.4 and higher can synchronize Security Profiles, Users, Groups and Firewall Objects with FortiSASE.

How does FortiManager license FortiSASE?

FortiManager must be purchased separately and counts FortiSASE as one managed device. No additional FortiSASE license is required.

Does FortiTrust Identity support user's accounts on multiple remote Identity Providers and Directories?

You can use FortiTrust Identity as an IdP Proxy with multiple remote IdP and on-prem directories. More details can be found [here](#).

How can I ensure homogeneous identity verification policy when there are users from multiple remote Identity Providers and Directories?

FortiTrust Identity, as an IdP proxy, can detect whether MFA was performed at the remote IdP and enforce or bypass depending on the condition. Further, FortiTrust Identity can be used to apply centralized Adaptive Authentication policies across federated IdPs.

What is the maximum number of FortiAP that can be connected to FortiSASE?

A maximum of 240 FortiAP can be connected to FortiSASE.

What is the maximum number of FortiExtender or FortiBranchSASE that can be connected to FortiSASE?

A maximum of 1024 FortiExtender and FortiBranchSASE can be connected to one FortiSASE account.

How are user seats counted?

You start consuming a user license when a user registers their first device. They'll keep consuming that license until either a FortiSASE admin manually removes them, or until all their registered devices have no telemetry check-ins for more than 45 days, at which point their license will be released. Every user is entitled to register to three different devices, if they register to a fourth one, an additional license will be consumed.

If a customer has an active FortiSASE PoC tenant (handled by pre-sales), and they decide to purchase the product, can they keep the PoC tenant in production?

Yes, the FortiSASE PoC tenant can be extended to a production tenant.

Is a user seat license required with branch or thin-edge deployments?

Yes, a user seat license is required.

Does Branch on-ramp support third-party CPEs?

Yes, third-party CPEs are supported.

What subscription is required to support additional dedicated IPs beyond the one dedicated IP included with every instance?

A Standard, Advanced, or Comprehensive subscription with a minimum of 500 users and a Dedicated Public IP Address add-on subscription are required.

How can I order FortiSASE China?

FortiSASE China must be ordered separately via an authorised SASE partner in China. Please, reach out to your Fortinet account manager, they can help connect you with the partner.
